# You said. We did.

"I went there for the very first time and I was almost lost due to lack of properly explained maps."

We have introduced live navigation in the mobile app, even without an internet connection.

"Delays in the resolution of matters that required timely attention."

We have introduced dedicated support in every hall, with a hall manager assigned to each one to ensure issues are resolved quickly and on the spot.

"Post-event, QR codes could no longer be scanned, resulting in a loss of potential leads."

We have extended lead retrieval data access to 30 days after the show and provided a dedicated onsite staff member to support exhibitors with any technical issues in real time.

"Hopefully, next time we will be allotted a bigger stall."

We have split the floor plan to give exhibitors bigger stands and more room, allowing for better time and engagement with visitors.

"Now that CPHI India and PMEC India are two separate events, I expect to shuttle services to be provided between the two venues."

We have introduced free shuttle services running every 40 minutes in both directions —four shuttles each way, to make moving between venues seamless.

"I would like 'interactive and knowledge based,' 'short informative sessions,' and 'technical seminars'."

We are introducing more interactive discussions, technical workshops, and concise expert-led sessions to match the practical, knowledge-exchange.

"I am interested in these topics: 'Newer research molecules which are upcoming,' 'Use of AI in drug development,' and 'Sustainability and eco-friendly packaging solutions'."

We have expanded our conference programme topics to cover AI in drug development, drug innovation, and sustainability, directly addressing the topics you told us matter most.
